

Thermaltronics

Press Release - New Range of Convection Rework Systems

Press Release - August 12th, 2016
For Immediate Release

Thermaltronics has announced the introduction of a range of convection rework systems, varying in wattage from 600 watts – 1300 watts and providing up to 480C maximum temperature output, thereby offering some of the most powerful rework systems available in the market.

The small hand-held unit, TMT-HA050, weighs only 1 KG and can be used for heat shrink applications, as well as convection rework.

Other bench top units incorporate turbine motors or diaphragm pumps which can provide up to 35/l min maximum air flow, at upto 1300 watts.

For difficult applications, Thermaltronics offers the TMT-HA600, a system with a 1300 Watt Heater and Diaphragm Pump, delivering 23L of air per minute.

All units are CE certified, ESD safe and come with a 1 year warranty.

In addition, Thermaltronics has standardised on the nozzle ranges and these are fully interchangeable between systems.

Nozzles and systems are competitively priced and available from Thermaltronics distributors worldwide. Interested customers are invited to learn more about the new products by visiting our website at: <http://www.thermaltronics.com>
